

PT Indonesia Comnets Plus

Portal Development

Summary

Client: PT Indonesia Comnets Plus (ICON+)

Subject: Portal Development

On the Web: www.iconpln.net.id, www.pln.co.id

By Technology: Portal

By Industry: Communication

Bening worked with PT Indonesia Comnets Plus to redevelop ICON+ enterprise portal. The main vision is that of an extensible, modular, high performance, remotely accessible through low bandwidth dial-up system.

Business Challenge

Shortcomings from previously operational portal system makes ICON+ became demanding in feature request and very picky in details including user interface layout. Add to that requirements of high performance and low bandwidth friendliness and one month allocated development time.

Here are some requested features in Portal development project:

- User and role management
- User grouping
- User personal info management
- Organizational structure, associated with role management
- Front page
- Standard portal applications including news, poll, gallery, email and forum
- Announcement
- Page management
- Authority delegation
- Activity monitoring
- Default themes

How We Helped

Bening team redevelops the existing current portal, mimicking the look using modular and more flexible technologies allowing ICON+ to extend the solution. The solution gives ICON+ flexibility to adapt to future changes.

Technology Involved

Bening used a set of technology to accomplish the project.

Software:

Drupal, PHP, MySQL

Hardware:

No specific hardware is required for this solution
